Company Introduction & Certificate

Linkstatic Techno is a premier technology consulting and digital product engineering organization specializing in modern full-stack web applications, reactive user interfaces, and bespoke enterprise solutions.

During my 6-weeks industrial training (15 May 2026 – 29 June 2026), I worked as a **Full Stack Web & Frontend Engineering Intern**, under the mentorship of **Mr. Aditya Pareek** (Founder & CEO).

Primary Focus: Architecting the **Lamiwood** e-commerce web platform using **React 19, TypeScript, and Tailwind CSS v4**, implementing interactive SVG layout engines, dynamic calculators, and state persistence.

LINKSTATIC TECHNO

CERTIFICATE

OF TRAINING

THIS CERTIFICATE IS PRESENTED TO

Aditya Swami

for successfully completing Summer Internship & Training Program from 15th May 2026 to 29th June 2026 in the Domain of

Full Stack Web & Frontend Engineering

This program is designed to develop foundational and advanced skills in Modern React, TypeScript, Component-Driven Design, Responsive UI Systems, Interactive Web Tools, and Production Web Engineering using modern industry tools and frameworks.

29th June 2026

Issued on

Mr. Aditya Pareek

Founder & CEO

Certificate ID: TR/2026-27/#00054

Technology Stack

Lamiwood – Architectural Surfaces E-Commerce Platform

FULL STACK & FRONTEND ENGINEERING

Frontend Core

- **React 19** — Component Architecture
- **TypeScript** — Strict Type Safety
- **HTML5 & Modern Web Standards** — Semantic Elements, Responsive Design & Accessibility

Styling & Design System

- **Tailwind CSS v4** — Utility-First Engine
- **Lucide Icons** — Modern Vector Icons
- **Framer Motion** — Smooth Micro-Interactions, Staggered Reveals & Transitions

Interactive Engines

- **Pattern Designer** — Live SVG Generator
- **Wastage Calculator** — Dynamic Math Engine
- **Comparison Matrix & Aging Simulator** — Spec-by-Spec Comparison & 20-Year Patina Slider

State & Client Storage

- **React Context API** — Central State Hub
- **LocalStorage Sync** — Persistent Cart & Orders
- **Custom React Hooks** — Encapsulated Business Logic, Filters & Local Storage Hooks

Routing & Architecture

- **React Router 7** — Client-Side Routing
- **Vite Engine** — Ultra-fast HMR
- **Route Code-Splitting** — React.lazy() & Suspense Fallbacks for Instant Initial Load

Tools & Workflow

- **Git & GitHub** — Version Control
- **VS Code** — Development IDE
- **npm & Node.js** — Package Lifecycle, Script Automation & Dependency Management

Training Goals & Project Overview

Goal of Training

1. Real-World Experience: Engineering a production-ready, full-stack architectural surfaces e-commerce application.

2. Modern Frontend Mastery: Applying React 19, TypeScript, and Tailwind CSS v4 for luxury responsive UI systems.

3. Interactive Tool Engineering: Developing live SVG pattern simulators, wastage calculators, and comparison matrices.

4. Professional Practices: Mastering Git version control, GitHub collaboration, Context API state, and performance profiling.

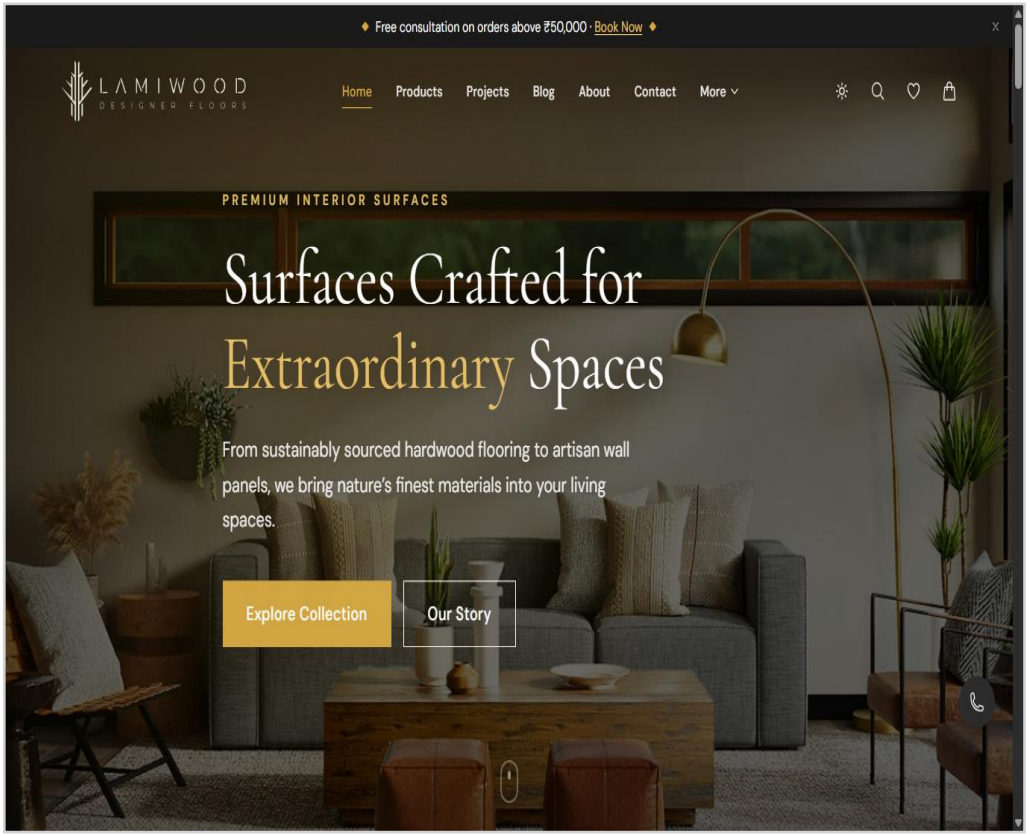

Lamiwood Platform Overview

Lamiwood is an advanced digital showroom designed for **architects, interior designers, and homeowners** to discover and specify luxury interior surfaces—including engineered hardwood, acoustic wall panels, and outdoor decking.

Key Problem Solved: Replaces fragmented offline sample distribution with instant digital exploration, dynamic pattern previews, material estimation, and a **Free Physical Sample Box** fulfillment workflow.

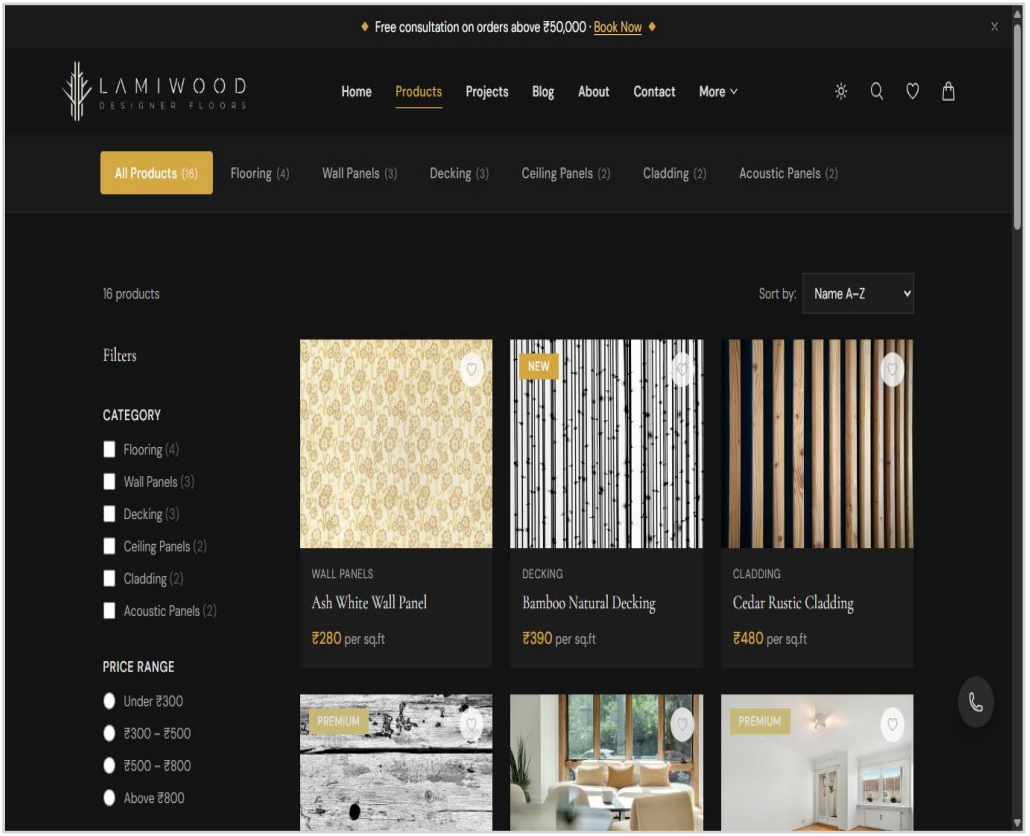

Architecture: Component-driven Single Page Application with persistent client-side state (React Context API + LocalStorage), Framer Motion reveals, and sub-second page transitions.

Working Project: Storefront & Catalog

Home Page & Brand Identity

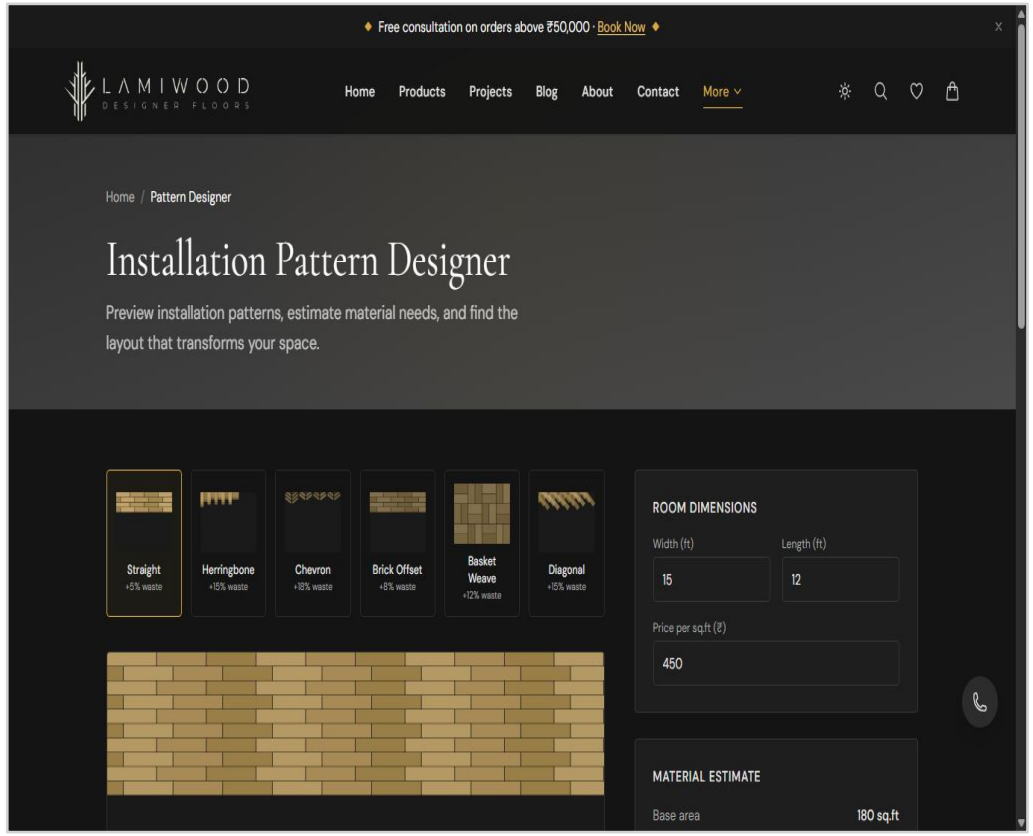

Luxury hero presentation, curated surface categories, and quick navigation.

Product Catalog & Faceted Filters

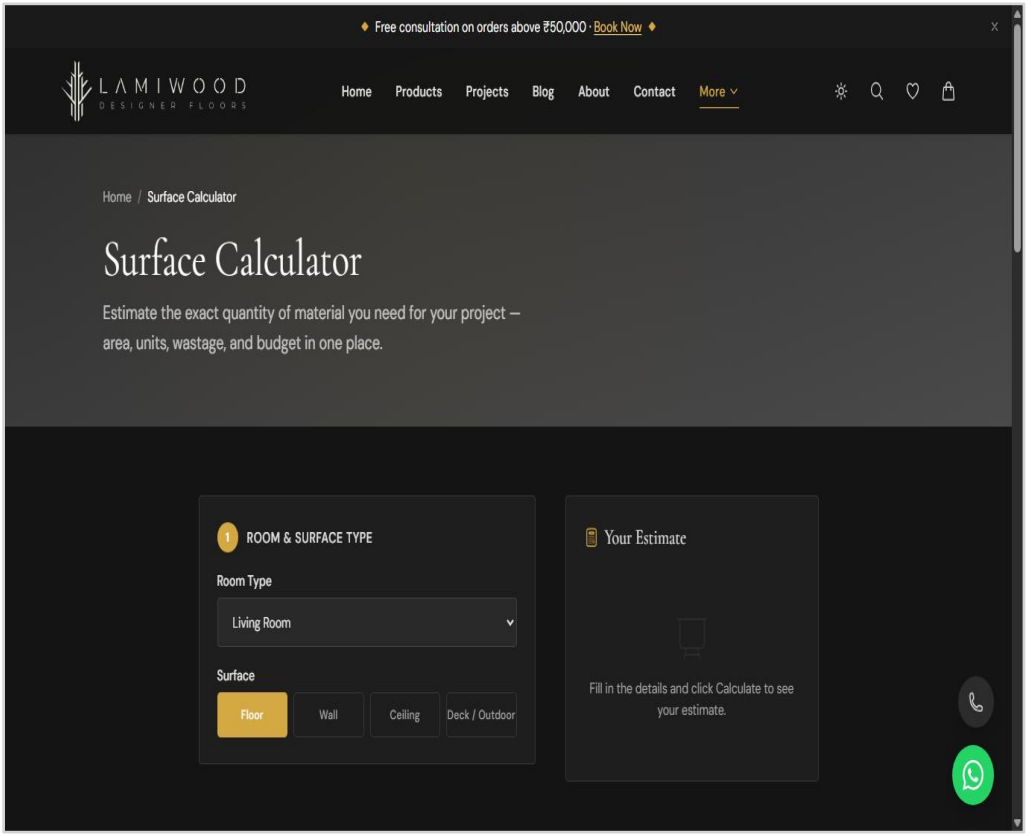

Multi-attribute category filters, price sliders, technical badges, and responsive grid.

Working Project: Interactive Tools

Installation Pattern Designer

Dynamic SVG visualizer for 6 layouts (Straight, Herringbone, Chevron, Basket Weave).

Surface Area & Wastage Calculator

Room dimension calculation, pattern-specific wastage formula (+5% to +18%), and cost estimation.

Future Scope & Key Learnings

Future Scope

1. Headless CMS & Cloud API: Integrate Strapi/Supabase for live catalog management and payment gateway.

2. WebGL 3D Room Visualizer: Real-time 3D and Augmented Reality (AR) to project floorings directly into rooms.

3. AI Interior Recommendation: Machine learning model analyzing room photos to suggest matching wood finishes.

4. B2B Trade Portal: Contractor portal with tiered wholesale pricing and CAD/BIM downloads.

Key Industrial Learnings

1. Component-Driven Architecture: Structured reusable, decoupled UI components with strict TypeScript types.

2. Reactive Client-Side State: Managed synchronized carts and sample orders using Context API and LocalStorage.

3. Interactive Tool Engineering: Built dynamic SVG mathematical generators for architectural pattern simulation.

4. Production Standards: Practiced Git workflows, code modularity, route code splitting, and sub-second load times.

THANK YOU
